Aegis9 is an Australian owned consultancy that specialises in providing tailored security solutions for both public and private sector clients, based on their specific needs.

## Summary

Australian owned security consultancy specializing in delivering services and products for Cyber, Information,

Personnel, Physical, Intelligence, Enterprise and Governance.

## Description

Aegis9 is an Australian owned consultancy that specialises in providing tailored security solutions for both public and private sector clients, based on their specific needs. We understand that all aspects of security should be part of the business and not prevent it from being undertaken. Our approach is to understand the nature of the business to design and deliver an overarching security framework, incorporating relevant processes and tools. This approach ensures that all security layers and pillars are interconnected and generate meaningful information that supports business outcomes.

Aegis9's skilled and highly experienced personnel have an average of 17 years' experience in the security industry, and have delivered programs for large Government departments and private enterprises alike. They undertake work across the full breadth of security requirements including high level enterprise risk and governance through to security analytics within a Security Operations Centre. Aegis9 provides physical, personnel, information, intelligence and cyber capabilities and has unparalleled expertise to deliver accreditation against a range of Government and industry standards including IRAP, ISM,

PSPF, ISO and NIST.

Aegis9 understands that the one size fits all approach has significant limitations including not identifying security gaps and weaknesses or, at the other end of the spectrum, stifling business under an unnecessary and complex security burden. Aegis9 supports business objectives and implements a risk-based and pragmatic approach to securing key assets. Risk is assessed using empirical evidence when the solution is implemented. Risk is then monitored and reassessed on an ongoing basis, with the outcomes informing the improvement of the overall solution. Aegis9 seeks to integrate with existing governance structures within its clients to reduce the management burden on business.

At Aegis 9, we focus on more than just security. Through our tailored approach, we seek to find the balance between product, process, and people-ensuring that the overall framework exists to deliver the best outcomes for your organisation. Our team will work with you to design, implement and manage a security solution that delivers real, ongoing and lasting results.

## Major Clients

> Defence, ATO, Home Affairs, GeoScience Australia, Optus, IBM, DropBox, Google, Dell, ASADA, Verizon, Fujitsu, VicTrack, ACIC, AFP, NEC, Finance, DHS, ANSTO, DiData, Leidos, LMA, SliceTech, Vault, DXC, QinetiQ, ActewAGL, Mbits, Infosys, Ernst & Young, and IBA.

## Previous Significant Projects

**2018**

**Seamless Traveller**

**\$4,000,000**

**Client: Home Affairs**

Over a two-year period, Aegis9 provided Architectural, Design and Security services to Home Affairs, assisting the Seamless Traveller Program, Travel, Cargo and Trade (TCT) Branch and the Cyber Risk Services Branch. This engagement enabled all related systems to be designed, documented, and certified in a time frame that allowed the program to remain on schedule.

---

**2007**

**DIISI**

**\$6,500,000**

**Client: Defence - Booz & Co**

Defence Information Infrastructure Security Improvement (DIISI) program, primed by Booz & Co. At the time, it was the most significant, and largest security program ever undertaken in the southern hemisphere, and Aegis9 personnel lead four tasks and all deliverables within them, resulting in Gartner providing a statement to Defence that the deliverables were 'global best of breed'. For this program, Aegis9 personnel also developed the security framework in which Defence would operate.

**2008**

**Managed Security Services**

**\$10,000,000**

**Client: Optus at ATO**

a 10-year ongoing program delivered for a large Network Managed Service Account being split into LAN/WAN, Video Conferencing, Telephony, Unified Communications, Gateways, and Mobility to the ATO. We delivered annual certification to the ISM, PSPF, and ISO27001. That program functioned successfully for so long, it managed the transition from ACS133 and PSM to the ISM and PSPF. During the engagement, only 2 minor incidents occurred, and all deliverable we achieved within time and budget.
